

# Oracle Database Assessment and Health Check Service

## Reduce risk and minimize disruption

**OneNeck® IT Solution's Oracle Database Assessment and Health Check service is designed to assess the performance, stability and availability of your business' Oracle-based systems to identify potential configuration issues and risks.**

Customers benefit from our Oracle capabilities and competencies when they use our managed hosting and application management services. This allows them to reduce risk and minimize disruption to business operations.

Now you can benefit too by leveraging our Oracle Database Assessment and Health Check service, wherever your Oracle database environment is located on-premises, in a hosted private cloud or in a public cloud, such as Microsoft Azure.

In order to evaluate your Oracle database environment, we use the same six distinct capabilities our managed hosting and application management professionals provide in the area of instance architecture, storage management, database management and application management.

The Oracle Database Assessment and Health Check encompasses the following areas:

- Oracle database configuration and parameters
- Database growth, archiving and purge activities
- Database performance and top queries
- Security and patches
- Routine maintenance activities
- Disaster recovery and replication configuration
- Grid infrastructure configuration (RAC and ASM)

Once complete, we'll provide recommendations for reducing risk or preparing for a migration to the cloud.

Our certified professionals are knowledgeable, highly skilled, deeply experienced and accountable for hundreds of Oracle environments supporting transactional, analytical and reporting applications, including Oracle E-Business Suite ERP, that run customers business processes, 24/7.

We will review the hardware, infrastructure and application configuration to identify potential risk areas. We offer formal recommendations in a scorecard that covers each reviewed capability. In addition, we provide guidance on the best leverage of the various cloud models (private, hosted private, public and hybrid) for your specific Oracle database environment.

We recommend our Oracle Database Assessment and Health Check any time during your implementation and user acceptance phase to validate the configuration before go-live. We also recommend you have an Oracle Database Assessment and Health Check on a semi-annual basis post go-live and prior to a busy cycle or major growth in the volume.

OneNeck recommends an Oracle Database Assessment and Health Check any time during your implementation and user acceptance phase to validate the configuration before go-live.

### Oracle Database Assessment and Health Check Benefits:

- Proactively uncover risk areas.
- Provide best practice recommendations.
- Uncover potential performance-related business or operational risks before they happen.
- Prepare your environment for busy business cycles and growth in the volume of data.
- Provide additional perspective on the health of your Oracle database and Oracle database environment.
- Evaluate your Oracle database environment readiness for a migration to the cloud.
- Provide recommendations on which of the cloud models best suit your business and technology environment.

### Oracle Database Assessment and Health Check Activation:

- We will set up a call to discuss your environment and any areas of concern.
- We will install our Oracle Database Assessment Health Check tool in a secure, non-intrusive, auditable way that will gather information to conduct analysis.

### Oracle Database Assessment and Health Check Deliverables:

- We provide a report detailing diagnostic information and configuration settings measured against Oracle and industry best practices.
- A user-friendly scorecard is delivered, detailing the health of each component reviewed, including a rating of good, fair or poor to help determine next steps in resolution.
- In the report, we include specific recommendations related to cloud readiness and the applicability of different cloud models evaluated against your business and technology requirements.
